PROPOSED S-C DEL RIO RELEASE

1. Colonel Hubert Jenks, Commanding Officer 4080th Strategic Reconnaissance Wing (Light), announced today that his command has been designated to receive the Lockheed U-2 aircraft. These aircraft will be assigned to the 4080th Strategic Reconnaissance Squadron (Weather) and will be utilized to support the 3rd Weather Wing of the Air Weather Service by providing meteorological data from altitudes up to 55,000 feet.

2. This will be the first assignment of the U-2 aircraft to a regular Air Force unit. This vehicle has previously been employed by the Air Force in a joint USAF/AFB program and by the National Advisory Committee for Aeronautics in a world-wide upper atmosphere meteorological research program.

STAT

Certain of these activities will be continued at Langley Air Force Base in conjunction with the annual operations of the 4080th Strategic Reconnaissance Wing.

3. The HACA program which is of limited duration and partly exploratory in character, has already yielded results of great value. The U-2 aircraft has proved to be highly satisfactory for high altitude research and to be more economical than tactical aircraft in the performance of this type of mission. Improved airborne weather instrumentation is being developed as a result of the HACA program. The operation of U-2 aircraft

~~2~~

at Langhlin Air Force Base will permit the Air Weather Service to continue this research on a longer term basis. The result should be to improve the service available to both tactical military units and to commercial airlines that employ jet aircraft and require accurate information concerning weather conditions at high altitudes.
